

## NRW

Water-cooled water chillers, heat pumps and moto-evaporating units  
With capacities from 5.5 to 38.29 kW

### R407C

Aermec adheres to the EUROVENT Certification Programme. The products concerned appear in the EUROVENT Certified Products Guide.

### Features

- Available in 7 sizes
- Versions:
  - NRW:** cooling only
  - NRW S:** as above but without pressure switch valve
  - NRW E:** evaporator unit. The units are despatched after being pre-charged.
  - NRW A:** with circulation pump and 100-litre storage tank (for models NRW 57-77-107 and 127)
  - NRW H:** heat pump
  - NRW HS:** as above but without pressure switch valve

- **NRW HA:** with circulation pump and 100-litre water tank (for models NRW 57-77-107 and 127)
- Cycle reversal on refrigerant circuit
- The versions with storage tank (standard for models NRW 27-37 and 47 designed for wall installation and with a capacity of 35 litres) are equipped with circulation pump, water tank, expansion tank, water filter and safety valve)
- Complies with EEC Safety Directive (CE) and electromagnetic compatibility directive
- High efficiency rotary, scroll and reciprocating compressors with low power consumption

- Differential pressure switch supplied as standard on all models
- Modular microprocessor control system
- Straightforward intuitive control panel
- High efficiency plate type heat exchangers
- Compact size
- Metallic protective cabinet with rustproof polyester paint
- Internal lining and compressor compartment lining in flame-retardant sound insulating material

### Accessories

- **PGS:** Daily/weekly programmer with facility to program two daily on/off cycles and set different parameters for each day of the week.
- **PR3:** Remote control panel with ON/OFF, operating mode selection (cooling / heating) and general alarm indication.
- **VP:** Pressure switch valve complete with connections, piloted directly in relation to condensation pressure; the valve modulates the

- volume of water needed to cool the condenser, thereby maintaining the condensation temperature unchanged.
- **VPH:** Pressure switch valve with bypass solenoid valve: during cooling mode operation the bypass valve is closed so the water flows exclusively through the circuit with the pressure switch. During heating mode operation the water flows through both branches of the circuit.

- **VT:** Anti-vibration mounts; set of four mounts to install in locations under the baseplate of floor-standing units to attenuate the transmission of vibration generated by the compressor.
